Interview

What is Global Vacations?

We are dedicated to giving you the best holiday offers globally. We source premium accommodation and locations from budget to luxurious, from short stays to long get away's, from quiet escapes to popular resorts, all with a focus on guaranteed customer service.

Do you provide Kosher food?

We advise all options of Kosher food no matter your destination. When holidaying as part of a group booking, we link up with kosher restaurants and hotels to ensure fine Kosher food for our customers during their holiday stay for both weekday and Shabbos.

Where do you travel?

Whatever and wherever your destination, whether it's globally, in Europe, or more nearer to home in and around the British Isles, we will source and advise to ensure a hassle free exciting holiday down to the last detail accommodating all your requirements.

Do you arrange a Minyan?

When you are holidaying with us as part of a group booking, we set up a Shul complete with Sefer Torah and tea & coffee facilities where people can feel free and use the facilities and enjoy the warm atmosphere day and night. For private holiday bookings, we will advise as to the nearest Minyan.

Can you find me something specific?

Yes sure, our destinations and accommodations will suit your specific needs, whether it is accommodation with Kosher food, Minyan, swimming and spa facilities. Our holidays will have thrilling activities for families and children of all ages as well as quiet retreats for those who simply want to relax sobering the breathtaking scenery and fresh healthy air!

Summer science experiment

Colouring or dyeing flowers is quite easy to do. It's a fun science experiment that kids of all ages can do at home, with visible results. All you need to do is, add food colouring and water to a vase or cup and the flower will absorb the coloured water up through its stem, in a process called transpiration.

What you need:

White flowers

Cups to hold flowers

Water

Liquid food colouring

Science fact

Flowers absorb water through the xylem, which is a tissue of thin tubes found inside the stem. Water is transported up the xylem to the various parts of the plant, including the flower. Various factors help water to move up the xylem, including molecules in the xylem that attract the water molecules, solar energy and transpiration. Transpiration occurs when sunlight evaporates water from flowers, leaves and stems. This loss of water creates a vacuum at the top of the xylem tubes, which encourages water to be sucked upwards to fill the empty space (resembles the movement of water up through a straw when someone is taking a sip.)

Take this further...

Try to make bicoloured flowers

Slice the flowers straight down the middle, so that the flower looks like it has two 'legs'. Put each flower 'leg' into a different coloured glass.

Enjoy!
